

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

MR. CHARLES MORRIS, in the Chair.

Twenty-four persons present.

MARCH 30.

The President, SAMUEL G. DIXON, M. D., in the Chair.

Thirty-five persons present.

Premolars and Form of the Skull.—DR. HARRISON ALLEN proposed to call the teeth back of the canines in Man the premolars, since they are followed in direct infra-position by the teeth of the same name in the permanent set: thus the deciduous series do not possess molars.

He also spoke of the effects of diseased action on the form of the skull. Many of the so-called types were of late origin, due to various phases of malnutrition and were not of much systemic significance.

The following were ordered to be printed :—
